Support for Better Life!

WELCOME TO ALLARD INTERNATIONAL

Allard International service all markets outside our subsidiaries in Scandinavia, UK, and USA. We are a dedicated Team who understand the importance of efficient and reliable supply, support, and service. Together with you we want to provide technical support, training, superior products, and excellent service, to ensure a positive difference to the lives of our patients – giving them Support for Better Life!

The range of products we offer expands continuously, and you will find several new products in this edition of our Export Catalogue as well. We are eager to be part of your efforts in achieving your orthotic goals and successful patient treatment.

We are here to help you and guide you for the right product choice.
Do not hesitate to contact any one of us at any time!

a

ALFESS™

FUNCTIONAL ELECTRICAL STIMULATION SYSTEM

Due to the shape, magnetic clasp and unique controls, ALFESS™ can be operated with one hand!

Sleek and conforming shape

Magnetic Clasp

Charging with magnetic docking

Touch Controls

FEATURES & BENEFITS

- Can be operated with one hand
- Lightweight, low profile design
- Easy to program either on the device, via remote control or using the app via a Smartphone
- Integrated electrodes (no need for replacements or extra ordering)
- One piece, one size, simplified ordering
- Can be used barefoot
- Water resistant (see instructions for duration)
- Two activity modes; Walking and Training
- Device plug-in for integrated battery

Control settings on the device or with remote control provided, or via Smart Phone App.

ALFESS™ - Functional Electrical Stimulation

ALFESS™, a new modern Functional Electrical Stimulator (FES) intended to improve gait in those with diminished foot and toe clearance. ALFESS™ is the latest contribution to the Allard AFO Product range. The electrical stimulation assists the nerves of tibialis anterior to actively dorsiflex the foot. The function of this well designed and innovative product is the result of a working collaboration between Allard's product development team and the manufacturer, which has resulted in a new, unique patient friendly device.

The device is applied to the upper part of the lower leg. During walking, sensors identify speed and angles of the leg to adapt to the walking pattern. An algorithm processes the information and sends out electrical impulses to the nerves to lift the forefoot. The user can easily increase or decrease the level of stimulation at any time. The training mode assists to achieve the best rehabilitation result. Training can be done either with the patients clinician, or the patient can do the training independently after being provided with clear instructions and training from their treating clinician. The unit is designed for bilateral use. It is easy to charge and is not dependant on any other parts.

Intended Use: Central Nervous System diagnosis such as: Multiple Sclerosis (MS), Stroke (CVA), Cerebral Palsy (CP), Incomplete Spinal Cord Injury, Traumatic Brain Injury(TBI).

Contraindications: Do not use with electronic monitoring equipment, NMR-imaging, defibrillator and high-frequency medical device. Powered muscle stimulators should not be used on patients with cardiac demand pacemakers. Do not use if you have a history of autonomic dysreflexia. Do not use FES following recent surgery where muscle contraction may disrupt the healing process. For more information about precautions and warnings please read Instructions For Use.

Foot & Ankle Orthoses

www.allardint.com

ToeOFF®

The Quantum Leap in AFO Technology Introduced in 1997, ToeOFF® is now recognized as a quantum leap in AFO technology. Today hundreds of thousands of individuals with gait impairment now enjoy a higher quality of life, thanks to the stability and dynamic response provided when wearing one of our patented carbon composite orthoses, ToeOFF®, Ypsilon®, BlueROCKER®, KiddieGAIT® or KiddieROCKER®. With more experience than any company in the industry and as the world leader in carbon composite AFO technology, our product development team continues to extend the opportunity for improved gait and increased walking capacity to more individuals as they expand the product offering.

Read more about Allard AFO at allardafo.com.

Anterior Design

Allard AFOs come up from the footplate onto the anterior surface of the leg to avoid pressure on the calf muscles and Achilles tendon. It allows for a floor reaction response to assist with knee extension.

Lateral strut

The strut is placed on the lateral side of the foot to create stability and function. It also allows for more functional use by bilateral users.

Light weight

The composition of Carbon fiber, fiberglass and Kevlar produces an extremely lightweight yet structurally superior design, which is of great benefit to the user.

Graded Stability

To be able to accommodate different users' needs, the sizes and products are graded in both stability and dynamic response.

Thin

The extreme thinness of the product makes it light and almost invisible under slacks or trousers.

Comfortable

As the shin plate comes on the anterior surface of the leg it provides for a more comfortable design for the user.

Dynamic footplate

The unique layout and the shape of the footplate contributes to a more dynamic and functional gait pattern.

Fits in shoe

The thinness of the foot plate and ability to trim it often avoids the need to increase the shoe size.

Open heel

The open heel design allows the Calcaneus to invert and evert which happens naturally during the gait cycle and allows the biomechanical chain reaction to occur.

40 WHY ALLARD CONTINUES TO BE THE WORLD LEADER
IN THE CARBON FIBER AFO MARKET AFTER 25 YEARS!
REASONS READ THE TRUE STORY AT **ALLARDAFO.COM**

Indications & Contraindications

Indications

The Allard AFO for adults is designed to manage drop foot in conditions such as Stroke, Multiple Sclerosis, Post-Polio Syndrome, Muscular Dystrophy, Spinal Cord Injuries, Traumatic Brain Injuries, Guillian-Barre Syndrome, Charcot-Marie-Tooth, Myelomeningocele, Neuropathy or Cerebral Palsy. They can also support gait in conditions such as Posterior Tibialis Tendon Dysfunction (PTTD) and toe amputations. The BlueROCKER® range can be used for partial foot amputations, most proximal level is Chopart.

The paediatric AFOs are designed to support foot drop, gait deviations secondary to proprioceptive deficit (either unstable or low-tone gait), toe-walking with no midfoot collapse, low tone crouch gait in conditions such as Spina Bifida, Cerebral Palsy, Muscular Dystrophy and Myelomeningocele.

Contraindications

Allard Adult AFO should not be used when patients present with:

- Foot and /or leg ulcers
- Moderate to severe edema
- Moderate to severe foot deformities
- Severe spasticity
- Severe proximal deficits (e.g. Quadriceps spasticity, Genu Valgum or Varum, Genu Recurvatum)

Allard paediatric AFO should not be used when patients present with:

- Lacking ROM towards dorsiflexion (needs at least 5° dorsiflexion past neutral)
- Very rigid foot structure
- Quadriceps spasticity
- Fixed postural Pes Valgus or Pes Varus
- Excessive postural Genu Valgum or Genu Varum
- Fixed postural Genu Valgum, Genu Varum or Genu Recurvatum
- Fixed/non correctable Pes valgus or Pes varus
- For KiddieFLOW-Crouch Gait and Spina Bifida

Limitations

When Genu-recurvatum cannot be orthotically managed (such as with insoles or wedges), COMBO™ (a knee orthosis attachment for ToeOFF® and BlueROCKER®) or knee orthosis CROSS™ may be suitable solutions. Further information on COMBO™ is available in this catalogue and on our website.

Note

Professionals selecting, fitting and customizing these orthoses should exercise due professional judgment throughout and provide appropriate education to the patient or caregiver, to minimize the potential associated risk. These risks may include the contraindications identified above as well as risks associated with the unique attributes of the patient or the caregiver circumstances.

PRODUCT SELECTION GUIDE

The scales on this page are provided as general guidelines only. Each individual, based on their unique deficits, gait patterns, proprioceptive response, and lifestyle needs, will respond differently to any orthotic device. This will influence the function and compliance results.

Further information about intended use, indications and contraindications, and suggested modifications to assure optimum alignment and patient comfort can be found in the Professional Instructions packed together with each Allard AFO or can be downloaded from Allardint.com. You can also view our 8-step videos on the Allard Vimeo or YouTube channel.

ALLARD AFO PRODUCT RIGIDITY SCALE

Each Allard AFO offers different rigidity to provide the amount of support needed without over-bracing. The chart below shows the variance in the amount of support each AFO offers. For example, Ypsilon® FLOW½ would be considered for patients requiring minimum support while BlueROCKER® for those that require the most support.

ALLARD AFO FUNCTION SCALE

As an example, Ypsilon® FLOW½ allows for the most ROM while BlueROCKER® offers the least. On the other hand, if you look at stability, BlueROCKER® offers the most whereas Ypsilon® FLOW½ will provide the least stability.

CUSTOM ALLARD AFOs

When patient's anatomical or function needs fall out of the parameters of the Product Rigidity or Function Scale, Allard also offers to fabricate Custom Carbon Composite AFOs. Ask Customer Service for ordering information.

Read more about SoftKIT and ComfortKIT on page 33-35.

ToeOFF® 2.0

ToeOFF 2.0 is the updated version of the Original ToeOFF. This new model has several new features that have been asked for from customers over time. The shape is more organic, with shorter side extensions and more rounded shape. Also the surface is smoother and more scratch resistant. The MikroFIX is pre-attached on the inside of the brace to accommodate a faster fitting procedure. It is also available with two different strap systems - With D-ring or with simple straps. Another feature is the increased height on size X-Large with 2 cm more compared to the Original ToeOFF.

For information on Indications and Contraindications please refer to page 11.

More about fitting and product selection can be found in the Allard AFO Professional Instruction.

ToeOFF® 2½

The Foot Drop Orthosis ToeOFF® 2½ has the same dynamic functions and stability as ToeOFF® 2.0 with the exception that the 2½ has a lower heel height of 7 mm, to adapt to modern shoes. The toe lift is also lower which results in more space in the toe box.

ToeOFF® 2½ has MikroFIX pre-applied to simplify the fitting process with the padding. The strap solution is the same as on 2.0, made from a durable and strong material. The straps can be applied on the interior or external side of the AFO.

For information on Indications and Contraindications please refer to page 11.

More about fitting and product selection can be found in the Allard AFO Professional Instruction.

ToeOFF® Flow 2½

ToeOFF® Flow 2½ is the combination of long experience and development in Carbon Composit AFO manufacturing, together with customers request. ToeOFF® has since the introduction 1997, been unique for it's great function, dynamic properites and good propulsion.

ToeOFF® Flow 2½ has a new recipe and other benefits.

- ½ heel height ~7 mm, easier to adapt to modern shoes
- Lower toelift
- More dynamics and ROM in A-P plane
- Lower, smoother profile of the footplate
- 2 new patent pending

For information on Indications and Contraindications please refer to page 11.

More about fitting and product selection can be found in the Allard AFO Professional Instruction.

Ypsilon®Flow½

Ypsilon®Flow½ was designed for your active patients or others who require less resistance or more flexibility. Ypsilon Flow is the AFO of choice for your active patients who need sagittal plane assist. The footplate is engineered to allow the orthosis to adapt to and move with the lower leg with less resistance to ground reaction forces while the proximal ends of the “Y” provide fixation points, eliminating pressure on the tibia crest. Ypsilon®Flow½ have a heel height of only 7 mm.

For information on Indications and Contraindications please refer to page 11.

More about fitting and product selection can be found in the Allard AFO Professional Instruction.

28761	Strap set for BlueROCKER 2.0, BlueROCKER 2½, D-Ring	XS - XL

BlueROCKER® 2½

The Foot Drop Orthosis BlueROCKER® 2½ has the same dynamic functions and stability as a BlueROCKER® 2.0 with exception that the 2 ½ has a lower heel height, 7 mm, to adapt to modern shoes. The toe lift is also slightly lower which results in more space in the toe box. BlueROCKER® 2½ has all MikroFIX pre-applied to simplify fitting of the padding. The strap solution is the same as on 2.0, made from a durable and strong material. The straps can be applied for either inside or outside closure on the orthosis.

For information on Indications and Contraindications please refer to page 11.

More about fitting and product selection can be found in the Allard AFO Professional Instruction.

NAVIGAIT™

Navigait is an alternative for users with a mild foot drop. The amount of dorsiflexion is easily adjusted with an elastic coil to accommodate the user's specific needs.

Indications: Intended to support a foot when the ability to actively dorsiflex is reduced due to conditions such as Stroke, Multiple Sclerosis, Post Polio Syndrome.

Contraindications: Navigait should not be used by patients who present with spasticity or severe oedema.

Custom ToeOFF®

It is possible to order a Custom ToeOFF® for patients that require a more intimate fit due to: Calf Atrophy/Hypertrophy, Unique Leg Shapes, Alignment Issues, Dynamic Response Changes. This can be done by scanning, casting, or measuring your patient. The product can have many different options. These options can be another heel height, stability or offload for prominences. All options are presented in PDF below.

Other: Please contact customer support for further information about the form or how to order a Custom ToeOFF® AFO.

Item no.	Model
28460	Custom ToeOFF®
28458	Custom Softkit
28459	Custom Comfortkit

Custom BlueROCKER®

It is possible to order a Custom BlueROCKER® for patients that require a more intimate fit due to: Calf Atrophy/Hypertrophy, Unique Leg Shapes, Alignment Issues, Dynamic Response Changes. This can be done by scanning, casting, or measuring your patient. The product can have many different options. These options can be another heel height, stability or offload for prominences. All options are presented in PDF below.

Other: Please contact customer support for further information about the form or how to order a Custom BlueROCKER® AFO.

Item no.	Model
28480	Custom BlueROCKER®
28458	Custom Softkit
28459	Custom Comfortkit

When patient's anatomical or function needs fall out of the parameters of intimate fit, Product Rigidity or Function Scale it is possible to order an individual custom version. Allard offers to fabricate Custom Carbon Composite AFOs. It will become a non-CE marked product. Ask Customer Service for ordering information.

Required shape/measurement can be supplied by scanning, cast (preferably negative in synthetic material) or by measurements. The product offers several options such as another heel height, stability or off-load for prominences.

When ordering you need to use a separate order form that you can download from our website. It is also possible to use our Configurator for direct electronic order. For more info, talk to our customer service.

Custom ToeOFF®

Custom BlueROCKER®

When you order a Custom ToeOFF® or Custom BlueROCKER® there are a few things to consider. Detailed below are the various customisation options and how they will affect the overall price of the custom AFO. Please complete an order form which can be found on our website in the Support Documents for the product

kiddieflow™

kiddieGAIT®

kiddieROCKER®

The Kiddie-versions should always be combined with an additional foot orthotic, designed to control the position of the foot. It is important that the foot position is as close to neutral as possible when bearing weight. The most common foot related problems like pronation, supination, pes varus, pes valgus should be corrected with this additional foot orthotic.

When spasticity is present, it is generally recommended that this foot orthotic include a deep heel cup to further encourage the heel-to-toe gait. The following are guidelines only. When the foot related problems are:

- *Mild* = use a Foot Orthotic that is deep and firm
- *Moderate* = UCB (Deep Foot Orthotic with trim line below ankle)
- *Severe and/or tight Achilles tendon* = SMO (Supra malleolar Orthosis or Molded Inner Boot)
- For low tone (hypotonia) and pronation, consider a soft SMO, such as SureStep™

UCB

SMO

SMO

KiddieGAIT®

Start off on the right foot - give toddlers an orthosis that will allow their little feet to move in a more fluid and natural biomechanical gait pattern.

- Carbon composite with anterior shell, lateral strut, and an engineered footplate with open calcaneus.
- Designed to allow integration of your custom foot orthotic to help control ground-up forces.
- Anterior shell to assist in management of proximal deficits by helping to manage either knee hyperextension or crouch gait.

KiddieFLOW™

KiddieFLOW™ is more flexible in the heel and toe area of the footplate and allows a greater range of motion. KiddieFLOW™ is based on the same principles as our adult FLOW models and retains the same geometry as KiddieGAIT® and KiddieROCKER®. The orthosis supports the dorsiflexion of the foot in the swing phase, provides better control of foot positioning in the late swing phase, which in turn improves stability in the stance phase. At the same time, the softer foot blade provides easier roll off at the end of the stance phase. For a combination of increased A / P and M / L control, can KiddieFLOW™, in addition to our other children's models, also be combined with individual insoles or SMO.

- ✓ By analysing the patient gait pattern and any deviations that may be present, you will have a more comprehensive idea of the most appropriate orthosis combination to select for the best clinical outcome.
- ✓ For excessive pronation or supination an FFO or SMO can be combined with our AFO's to achieve increased M/L control.
- ✓ As the need for A/P control increases, progressively more rigidity is usually also needed. Our KiddieFLOW®, with FFO's or SMOs, or KiddieGAIT® and KiddieROCKER® orthoses, with or without FFO's or SMOs, may provide adequate compensation for most patients.
- ✓ It is necessary to perform a repeated evaluation that includes a gait analysis while the patient is wearing the chosen orthoses combination to ascertain improvement in function.
- ✓ For the most severe cases of gait deviations, that include an increasing degree of spasticity and more complex gait deviations, an orthosis with more rigidity should be considered.

KiddieROCKER®

KiddieROCKER® will offer extra rigidity to support enhanced balance and posture control, especially for children with weak quadriceps muscles. KiddieROCKER® was developed for the paediatric population with more involved pathology than only footdrop.

- Carbon composite with anterior shell, lateral strut, and an engineered footplate with an open calcaneal design.
- Designed to allow integration of your custom foot orthotic to help control ground-up forces.
- Lateral strut can also serve as a base to affix a T-Strap to control excessive eversion at the ankle.
- Anterior shell to assist in management of proximal deficits by helping to manage either knee hyperextension or crouch gait.

KiddieGAIT® SoftSHELL™ YOUTH

The SoftSHELL for KiddieGAIT comes in two different versions depending on size. The youth sizes have the outer SoftSHELL material combined with the SoftKIT Interface - all in one with two straps with D-ring. This version for the youth sizes comes in a pink pattern with hearts and a grey pattern with skulls. Patterns may change over time without notice.

Item No. Grey w/Fun print	Item No. Pink w/Fun Print	Description	Size

28359 0014	28358 0014	SoftSHELL with Interface	X-Large

KiddieGAIT® SoftSHELL™ BABY

The three smaller Baby Sizes have a slightly different construction. The shell is a separate cover that should be combined with a soft interface. If a custom interface is not required, we suggest SoftKIT. The simple and circular closure provides a nice and firm cover over the calf.

SoftKIT™2.0

All Allard AFO's should be worn with a soft interface between the orthosis and the tibial crest. SoftKIT™ is a padding system that includes two narrow neoprene pads to create a pressure-free channel to help relieve any potential discomfort from bony prominences. The kit includes all necessary items for each model, and an extra pad is included to allow for regular exchange for laundry. The 2.0- versions works for the 2½-models as well.

Boston Soft AFO

The Boston Soft AFO is a resting splint which is an inexpensive alternative to a custom AFO. It is lightweight and manufactured from 3 mm soft-feel polyethylene foam with a 3 mm polypropylene heel insert. This AFO is fully adjustable and can be easily trimmed with scissors.

Intended Use: Myelomeningocele, Muscular Dystrophy, Cerebral Palsy, Trauma and Heel Ulceration.

Other: Wipes clean with soap and water.

Elements Stretch-UP Sock

The Elements Stretch-Up Sock is an easy to use and highly effective device for treatment of Plantar Fasciitis. By keeping tension on the plantar fascia tissue during night it helps reduce the impact associated with initial stretch under body weight in the morning.

The proximal tibial cuff reduces migration down the leg and the strap attached to the toe section is adjusted with hook and loop. Start with low tension and gradually increase the stretch. Do not over stretch.

Intended Use

Plantar Fasciitis.

Item No.	Size	Calf circumference
34108 0011	Small	< 20 cm
34108 0012	Medium	20 - 40 cm
34108 0013	Large	> 40 cm

Carbon Footplate

The carbon footplate is intended to protect the MTP joints and the forefoot by limiting the ROM, distributing the pressure in the forefoot, and facilitating rollover. The footplate can also be used to gradually increase movement after immobilizing treatment with a post-op shoe or walker. It can improve balance after toe amputation, dig IV, and/or V. The footplate should be covered by an insole or custom foot orthotic.

Indications: Hallux rigidus, Hallux Limitus, stress fractures and other injuries or arthritis conditions in the forefoot/midfoot, forefoot trauma, sprained toe.

Bebax Correction Orthosis

Bebax is prescribed and used to correct forefoot deformities.

Bebax is an innovative, pediatric orthosis designed for progressive and dynamic correction of congenital forefoot deformities. Highly regarded as a medically accepted alternative to casting or splints, eliminating skin problems commonly associated with casting.

Patented multi-directional hinge enables the forefoot to be adjusted in relation to the hind foot, on all the planes: vertical, horizontal and oblique.

Multi-directional hinge is quickly and easily adjusted to position the forefoot in the desired position: abduction, adduction, pronation, supination or external and internal translation.

Not recommended for treatment of clubfoot. Nor intended for use while walking.

Intended Use: Congenital forefoot deformities, connected with structural deformities: Metatarsus Varus, Pes Talus, Talus Valgus, Pes Varus, Pes Valgus, Pes Supinatus.

Other: Sizing = length of inner sole

COMBO

Low profile and unique orthotic solution for hyperextension in combination with foot drop

Allard AFOs have a proven place in rehabilitation and daily life for patients with foot drop. Sometimes Allard AFOs are combined with some kind of knee orthotic solution to prevent knee hyperextension. Combo is a unique solution for this combination. Combine with ToeOFF® or BlueROCKER®.

- Combo is individually adapted to every patient. The different components can be combined to fit different sizes and lengths of patients.
- Required size of thigh part depends placement on the thigh. Although it can not be place more distally than 10 cm above the tibiaplateau.
- Size of tibia connector depends on size of ToeOFF® or BlueROCKER®.
- Size of popliteal interface depend of knee width.
- All 5 components are needed for a complete orthosis.

COMBO™

Dynamic low profile, lightweight, functional orthotic solution. For the management of genu recurvatum or chronic knee instability, accompanied with footdrop. Low profile and lightweight – a KAFO your patients will wear! Uprights easily shaped and adjusted to optimum height for patient. Modular components allow you to accommodate variances in thigh and calf circumference. Easy to don and doff. Easily removed when wearer is relaxing (watching TV, etc.)

Intended Use

Knee instability, knee hyperextension in combination with a foot drop from stroke, post-polio, MS, etc.

Contraindications

Weight Limit - 150 kg, Height Limit - 2 m, Use of COMBO with any product other than ToeOFF® or BlueROCKER® is prohibited.

C.H.E.C.K.™

Comfortable Hyper Extension Control Knee

How CHECK Functions

Soft upper and lower suspension sleeves and popliteal interface combined with adjustable straps to hold the frame in position. The straps are adjusted to provide a “stop” to control ability of the knee to hyper-extend.

Comfortable Hyperextension Control

Longer uprights (when compared to the Swedish Knee Cage) reduce the amount of pressure required on the femur and tibia to control hyperextension, making the orthosis better tolerated by the patient.

Effortless Motion Joint

Dual axis joints allow for full knee flexion and allow each of the four uprights to move independently over each other, from extension to flexion, enabling the orthosis to follow the natural movement of the leg and prevent downward migration.

Low profile and Low weight

Low profile hinges with slim uprights that are easily shaped to fit the contours of the leg to create an orthosis that becomes virtually unnoticeable under clothing. Weight: 640 grams.

Comfortable Frame Suspension System & Tissue Interface

Made of synthetic leather laminated with polyurethane foam and brushed polyester tricot. These unique pads provide a soft interface between soft tissue and the orthosis.

Easy to Don and Doff

D-loops are included for patients with limited use of their hands to make the application of the device easier. Straps are attached to the suspension sleeves - eliminating confusion of which strap goes where. After initial fitting, wearer just closes or opens one side only of the front straps for simple application and removal.

Indications

Genu recurvatum, unstable knee caused by laxity of the ligaments, mild valgus instability, mild varus instability, neurologic function impairment (post C.V.A.)

Contraindications

Not suitable for sports activities.

CROSS™ Knee Hyperextension orthosis

Cross™ is a functional combination orthosis with unique single handed application.

It is intended for mild to moderate knee hyperextension due to neuromuscular diseases or other injuries. The brace can be used together with an Allard AFO when knee hyperextension is present together with foot drop.

- Anatomically shaped patella opening with silicone buttress
- Silicone band strategically placed to prevent migration
- Self-contouring Condyle shells
- Adjustable ROM stops:
Flexion: 45°, 60°, 75°, 90°
Extension: 10°, 20°, 30°, 40°
- Hyperextension resistance is easily adjusted with one hand
- Shaped reinforcement stays to provide guidance for patient to correctly align the support.
- Pre-flexed anatomical shape fits the contours of the leg to provide comfortable fit under AFO.

Patient friendly features include thin, breathable lightweight material with an ultra-smooth friction liner with no visible seams.

Supplied with unique Cross™ donning aid which allows for one-hand application, well suited for patients with limited balance to don the orthosis themselves while in a seated position and those patients with hemiplegia or limited hand motor skills.

Intended Use

Mild to moderate knee hyperextension due to neuromuscular diseases or other injuries.

SELECTION®

Accommodative function

When working with the SELECTION line of products, we have chosen a new approach to material selection. New, fresh and with a modern feel it is a combination that meets the users requirements. The Selection material is thin and pliable, allows the skin to breath and keeps it cool.

Hook and loop material has also been integrated into the material to make the brace as low profile as possible. This material does not require any edging tape which not only contributes to the low profile, but also allows the practitioner to cut away material if necessary without fraying (only for model 35701).

Excellent fit

During the design and product development process for the Selection knee braces, continuous focus was placed on the underlying anatomical structures. The patella opening follows the anatomical teardrop shape. To provide a firm hold and to avoid migration the lower strap on the calf section has been positioned high on the muscle body - on top of the Gastrocnemius.

SELECTION® Knee Minor & Minor Wrap

Knee Minor comes in a tube and a wrap-around version with stainless steel spiral stays on each side. It gives a mild support and good compression. Minor is adjustable on the front of the thigh and on the calf. It also has an anatomically shaped patella opening and silicon "Stay-Up" on the inside to prevent migration.

Intended use

Knee pain in weight bearing, minor injuries such as stress in ligaments or mild sprains.

SELECTION® Knee Patella

This brace is especially designed for treatment of different kinds of patella related problems. The patella pad can be moved into different positions - medially, laterally or underneath the patella. The brace gives a light stabilization and has stainless steel spiral stays on each side.

Intended use

Patella dislocation, patellofemoral pain syndrome, Schlatter, Jumpers Knee, anterior knee pain.

SELECTION® Knee Optima

This model is a pull-on version with all the features that you could wish for in a knee orthosis. It combines a range of motion control with medial/lateral stability and compressive support for knee instability. It also gives assistance in reducing hyperextension, adding M-L stability and can assist in A-P instability. It has an anatomically shaped patella opening and silicon "Stay-Up" on the inside to prevent migration.

Intended use

Mild to Moderate knee hyperextension, Weak ACL, Partial ACL rupture, Mild to moderate M-L instability, Mild Osteoarthritis, Post surgery.

SELECTION® Knee Optima Wrap

This is a wrap-around model with all the features that you could wish for in a knee orthosis. It combines a range of motion control with medial/lateral stability and compressive support for knee instability. It also give assistance in reducing hyperextension, adding M-L stability and can assist in A-P instability. It has an anatomically shaped patella opening and silicon "Stay-Up" on the inside to prevent migration. Optima Wrap also comes in PLUS sizes to accommodate larger thigh circumferences.

Intended use

Mild to Moderate knee hyperextension, Weak ACL, Partial ACL rupture, Mild to moderate M-L instability, Mild Osteoarthritis, Post surgery.

ACTIVE X Patella

This open model is designed to stabilize the patella and prevent luxation and sub-luxation. The built-in pad fits into the groove on the side of the patella and grabs hold to keep it in place. As an extra support it is combined with a plastic half moon shaped splint that is removable. ActiveX Patella is made from the ventilated ActiveX-material to give comfort and ventilation.

Intended use

PFPS (Patellar Femoral Pain Syndrome), Chondromalacia patella, luxated or subluxated patella.

ACTIVE X Knee Short

This completely new line of knee braces comes in a short and long version as well as in a tube and a wrap-around model. It is intended for different kinds of knee pain, such as mild to moderate sideways instability. The aluminum uprights has adjustable flexion and extension stops which allows for different range of motion adjustments. Joint is pre-set in 10° of flexion. Other flexion/extension stops are included in the package.

The ACTIVE X Short is made from a ventilated spacer material. This model has one circular strap on the thigh section and one on the calf section. These can be re-positioned individually. All straps has a plastic D-ring. This orthosis is 32 cm long.

Intended use

This product is intended for patients with various knee pain such as mild to moderate M-L instability. The support gives a light compression and keeps the knee warm. MCL/LCL injuries. Minor medial or lateral meniscus injuries. Mild osteoarthritis. Bursitis. Joint disorders. Synovitis.

ACTIVE X Sleeve

This tube version is designed to be used for milder knee pain. The brace is made up of two different materials. One more compressive synthetic neoprene at the front and the ventilating Active X material on the back. The brace provides compression and improved proprioception. The Patella opening is anatomically shaped for optimal fit. Around the Patella opening is a soft padding for increased stabilization of Patella. The brace have Velcro adjustments on the front of the thigh and on the back of the calf. Active X Sleeve have one spiral stay on each side. This orthosis is 32 cm long.

Intended Use

Knee pain under load, milder ligament injuries, overexertion, mild knee instability.

Ascender® Post op Range of Motion Knee Brace

Ascender® is a Telescopic (44-70 cm) Range of Motion Knee Brace. Extension limitation can be adjusted within the interval -10°(hyperextension) to 70°. Limitation of flexion can be adjusted between 10° to 120°. Adjustments are easily done by lifting and moving the stops on the kneejoint.

The joint can also be locked in 5 preset positions, drop lock settings: -10°(hyperextension), 0°(neutral), 10°, 20° and 30° flexion. The joint can be extra secured by a “anti-tamper lock”. Once activated this has to be cut to open.

Length of side bars can be adjusted individually. Side bars have obvious markings to secure same length position used on both lateral and medial side bar.

The soft and comfortable padding is designed for optimal air-flow and has silicone for optimal grip. Straps are securely locked to be kept in place while fitting and trying out. The brace is definitely closed by sturdy closures. Strap lengths can easily be adjusted thanks to the innovative Y-tab solution. Paddings and straps can be hand washed.

Universal model, fits both right and left. One size.

Intended Use: Postoperative treatment.

Hip Orthoses
www.allardint.com

S.W.A.S.H.[®]

Increase Levels of Function

What makes SWASH[®] unique to other hip orthoses is that it offers controlled variable abduction. It is engineered with a complex series of angles to maintain good hip alignment as the uprights follow the pathways of motion of the femurs.

While standing or walking, SWASH[®] provides just enough abduction to prevent scissoring and medial femoral rotation. As the hips are flexed to assume the sitting position, it automatically further abducts the hips to create a tripod base for enhanced sitting stability and more upright posture.

The most visible benefits of the SWASH[®] are readily apparent by improvements in sitting and standing posture and stability, and for the ambulatory user, improvement in gait. However, perhaps the most important benefit the SWASH[®] offers is guidance for hip alignment.

Hip alignment

With

Without

S.W.A.S.H.® STEADY (Replaces previous SWASH Classic)

- Plastic pelvic section extends from L2/L3 to the coccyx, providing maximum torso support for candidates with flaccidity or very limited trunk control
- Single strap fixed front closure to secure torso support
- Increased posterior and side support
- "Childproof" thigh cuff closure
- 6 mm diameter uprights for size 1, 8 mm uprights for size 2, 3, 4

S.W.A.S.H.® GO (Replaces previous SWASH Low Profile II)

- Anatomically shaped metal pelvic section rests over the pelvis and is secured in position by attaching to a small plastic reinforced abdominal pad
- Double strap front closure allows symmetrical application
- 8 mm diameter uprights in all sizes - extra strong for extra high tone
- Interchangeable thigh cuff sizes
- Overlap design thigh cuff closure for easy application and removal
- Contoured posterior joints reduce interference with posterior walkers and other standing/walking/sitting aids

Two options for upright selection

More abduction in seated position

Increased abduction offers maximum opportunity for muscle lengthening in the sitting position, and is also recommended when there is need to influence the trunk toward more spinal extension.

123°

Less abduction in seated position

Reduced abduction better accommodates wheelchairs with narrow seat structures and is better tolerated by children with tight adductor muscles.

115°

PELVIC SECTION Measure: SWASH® STEADY - At level of the natural waist for maximum trunk stability. SWASH® GO – At the level of the ASIS. Ideal is to fit the orthosis at mid-pelvic girdle to obtain good pelvic stability.	Size	Sizes Available		Circumference	
		STEADY	GO	Adjustment Range	
	1	✓	✓	400-465mm	15 ¾-18 ¼in
2	✓	✓	460-550mm	18-21 ¾in	
3	✓	✓	540-630mm	21 ¼-24 ¾in	
4	✓	✓	620-720mm	24 ½-28 ¼in	
5	N/A	✓	710-810mm	28-32in	
6	N/A	✓	800-900mm	31 ½-35 ½in	

THIGH CUFFS Measure at distal thigh, just proximal to the condyles. Ideal is to fit the cuffs as distal as possible without creating pressure or interference in the popliteal area. However, pressure on the thorax, excessive spinal flexion, or discomfort due to hamstring tightness, may be relieved by moving the cuffs up 1 - 3 inches.	Size	Sizes Available		Circumference	
		STEADY	GO	Adjustment Range	
	1	✓	✓	210-250mm	8 ¼-9 ¾in
2	✓	✓	250-290mm	9 ¾-11 ½in	
3	✓	✓	290-330mm	11 ½-13in

Dynamic Textile Orthoses

www.allardint.com

elements *body*

Elements Body

Elements Body is an orthosis made of lycra fabric, composed of various panels. It is designed to give constant proprioceptive feedback through pressure and resistance. The function of Elements Body is to improve posture and stability. This is achieved by providing increased pressure to the body through a snug custom fit. By increasing the deep sensibility, proprioceptive feedback is increased. The proprioceptive feedback may also improve the patient's fine motor skills and functional performance. Various reinforcements can be selected to optimise flexion, extension, pronation and supination positions.

Intended Use

Elements Body can be used as a treatment to reduce increased tonus in neurologic conditions such as Cerebral Palsy, Acquired Brain Injury, Acquired Spinal Cord Injury, Cerebellar Ataxia, Athetosis, Spina Bifida, Stroke or Multiple Sclerosis. Elements Body can also be used in the treatment of joint instability and sensory loss for the following conditions: Persistent Hypotonia, Ehlers Danlos Syndrome and Hypermobility, joint laxity.

The orthosis is ordered and manufactured according to individual measurements. The suit can be designed as a full suit, with short or long arms and legs, or arms with or without gloves. Reinforcements and zippers can be sewn on as needed for support or function. The design is determined by an orthotist in consultation with a doctor and physiotherapist. It is the orthotist who performs the measurement after completing the training. The best results are obtained if the orthosis is used for at least six hours a day. The suit should initially be used for shorter periods to gradually achieve the goal of six hours per day. It should not be used for more than 8 - 10 hours per day. Elements Body orthoses should not be used at night.

HyMo

HyMo is a textile orthosis in shape of a body and/or trousers with short or long sleeves and legs. It is intended for patients with Ehlers Danlos Syndrome. HyMo fits tight against the body and can improve posture and give increased joint stability, i.e. hips and shoulders get stability from the tightness of the material. The HyMo is only available as a made-to-measure orthosis. It is used gradually until the desired time of use is reached, 8 - 10 hours per day. The material in HyMo has been carefully chosen, produced and certified according to Oeko-Tex standard 100, class II.

Intended Use

Ehlers Danlos Syndrom.

NAVYTMXtra

NavyXtra is a newly developed Back Support that offers extra stability with an individually fitted back plate of 3D-LITE™. The back plate of light-weight and breathable Low Thermoplastic Material is easily shaped to fit the patient and removable plastic plates in the front contributes to a very stable support of the spine for patients with more severe conditions. The black textile is the same strong and ventilated elastic material used for our range of Navy X products.

Intended Use

Fractures, Post-op Spinal stabilization, Post-Op Disc Surgery, Degenerative Disc Diseases, Herniated Disc, Bulging Disc, Spondylolisthesis, Spondylolysis, Facet Syndrome, Spinal Stenosis.

Contraindications

Unstable spine conditions.

Adjustment

This product should only be altered by a medical professional. The 3D-LITE™ back plate is heated with a Heatgun, Oven 80°C or in Waterbath 70°C.

Navy Xtra consist of three parts:

- The shapeable back section in 3D-LITE™ material.
- Cover for back section.
- Elastic support with stabilizing straps and reinforcement panels in front section.

NAVY X™

NAVY-X is a back support in durable ventilated elastic material. Tailored to fit both men and women. Firm elastic stabilization straps allow the wearer to relax the amount of compression during light activities, or tighten when maximum stabilization is required for extra support during strenuous activities. Simple and useful model.

Intended Use

Low back pain and back insufficiency

SELECTION®

SELECTION® Back Low & Regular

These two models fit both a straight as well as a curved body type. It comes with extra stabilizing straps that "cross-over" in the back. The stabilizing straps move smoothly in the specially designed D-rings. The reinforcement in the back section distributes pressure over a larger surface, yet leaves the spine free from pressure. On the front section, the extra strap and pocket for the hands will assist in closing the front smoothly.

Intended Use

Low back pain and back insufficiency.

SELECTION® Back Wide

This model is especially designed for people with a more excessive front section that need extra lift and support.

The closure on the front is divided into two sections to make it easier to put on and also to be able to adjust the height on the front section. It has extra stabilizing straps that "cross-over" in the back. The reinforcement in the back section has a new shape and construction that divides the pressure over a larger surface, yet leaves the spine free from pressure. On the front sections the extra strap and pocket, for the hands, will assist in closing the front smoothly.

Intended Use

Low Back Pain and Back insufficiency for users that need extra support in the front section.

Camp® ONE Low

LSO Camp One is a series of supportive textile corsets in different heights, made from a sturdy cloth with cotton as base (60% cotton + polyamid, elastan and polyester). These materials together generates a material that offer both support and durability over time.

This low model supports the lower back and sacrum. Easy to apply and adjust for appropriate compression and stability. Velcro locking in front. The model has double straps to pull for even fit and support. Incorporated plastic springs around the corset + 2 open channels for extra supportive splints (moldable) that are included, if needed.

The flexibility of the material allows for good compliance for both straight and contoured waist shape. The material used in Camp One is free from latex.

Intended Use: Back pain and muscle weakness

Wrist- and Thumb Orthoses

www.allardint.com

S.O.T THUMB ORTHOSIS

S.O.T Thumb is an anatomically shaped orthosis for thumb and palm. The orthosis is designed to restrict movements in CMC and MCP joints, support the hand's arch and position the thumb's joints and muscles in a comfortable and desirable resting position to avoid overstretched ligaments that can lead to subluxation in the joint.

Features and benefits of S.O.T Thumb includes:

- Adjustable aluminium core that can easily be shaped to the patient's anatomy for a perfect and comfortable fit.
- Adjustable as the contracture changes.
- Machine washable, with cover, at 40°C.

Combine the thumb orthosis with a regular wrist orthosis for additional support (Vission 46029 or SELECTION® 35207)

Intended Use

Osteoarthritis, rheumatoid arthritis, adduction contracture of the thumb and overload injury of the CMC joint.

Note when treating Osteoarthritis in CMC regions 1-4: At stage 4 the scaphoid is involved. The thumb support should then be combined with a wrist orthosis.

Item No.	Description	Side	Size	MCP Width**	Length ** (from wrist to fingertip)

** Relation between MCP width and wrist to fingertip length can vary. Regard the size interval only as a guide.

S.O.T Resting Splint

Many stroke patients over time may get a variety of complications, such as spasticity, paralysis, pain, loss of sensation, decreased proprioception and oedema of the hand and arm. These complications can cause a reduction of mobility in the hand and eventually contractures may develop. Therefore, it is important to start with orthotic treatment, along with hand therapy at an early stage, before spasticity is established.

S.O.T is a resting splint for the spastic and paretic hand, when the goal is to maintain or increase the mobility of the hand. It can also protect the hand with low tone from getting injured during ADL. The orthosis is smooth and lightweight. The S.O.T has an aluminium core which allows adjustment to the desired position. The aluminium core is embedded into polyethylene foam, which is covered with fabric. The brace is delivered in a resting position. A resting position can offer pain relief, relaxation to the hand and it also provides a good biomechanical position that may reduce the risk of flexor shortening of the wrist and fingers.

Patients suffering with rheumatoid pain may benefit from S.O.T as it prevents the hand from falling into unfavourable painful positions. The orthosis can be readjusted into POSI or Intrinsic-Plus Position.

SELECTION®

a material developed for wrist and thumb orthosis

SELECTION®

All our materials are carefully tested at internationally approved testing institutes to ensure that they contain no substances that can be harmful to either adults or children. The Velcro straps used in the products are carefully selected to suit their particular function and has also been tested to ensure long lasting durability.

SELECTION® Fingerloop

A twin orthotic brace that efficiently holds 2 or more fingers together, with purpose to allow the stronger finger to support the weaker as support, protection or to increase ROM. Can also be used as a static progressive splint for increased ROM in DIP-joint.

Made from 100% durable and quick drying nylon. Seamless material allows to be cut to individual shape. Either readymade straps or sheet which easily can be cut to individual straps in desired widths.

Intended use: Support for fingers after injury, surgery, stabile fractures, metacarpal fractures, chronic pain, sprains, contractures.

SELECTION® Thumb Orthosis SOFT

Soft and elastic thumb orthosis that unload the thumb joints and provides light support. For mild CMC and MCP conditions, it gives unloading but allows an active “Pinch grip”. When resting, the thumb is kept in neutral position without straining the muscles and tendons. Can be trimmed to the desired shape.

Intended use

Mild arthritis in the first CMC-joint. Protects the CMC-joint and the first MCP-joint. After trauma, in case of hyper mobile thumb and wrist, after arthroplasty surgery.

SELECTION® Thumb Orthosis RIGID

Soft and elastic thumb orthosis with extra stability around the thumb structures. The design supports the muscles, keeping the thumb in neutral position and unloads CMC and MCP, but allows an active “pinch” grip. At rest the thumb is kept in neutral position without straining the muscles and tendons. Can be trimmed to the desired shape.

Intended use

Mild arthritis in the first CMC-joint. Protects the CMC-joint and the first MCP-joint. After trauma, in case of hyper mobile thumb and wrist, after arthroplasty surgery.

SELECTION® Ulnar Deviation

Selection® Ulnar Deviation is intended for the management of Ulnar Deviation. Corrects alignment of joints of the fingers to improve extension, strength and function of the hand. Reduces pain and joint stiffness. Ulnar deviation is likely to be a characteristic for those with various forms of inflammatory disease, such as Rheumatoid Arthritis. This may also be used for realignment and stabilization in patients with joint laxity and muscle weakness.

35218 1013	35218 2013	Black	Large	23 - 27 cm

SELECTION® SHORT

Flexible, elastic wrist orthosis without stays, but with fabric reinforcement on the volar side. Low cut to follow the hand's natural bend. A locking system with lacing is easy to open and close with one hand. The closure on the ulnar side reduces the wrist of the thumb being positioned incorrectly. Adjustable thumb grip. Due to the construction of the material it is possible to adjust the shape slightly by trimming with scissors. The length of the orthosis is 13 cm on the volar side.

Intended use

Supports and relieves the wrist after injuries, surgery, hypermobility, chronic pain, arthritis, overloading. Can also be used as a preventative measure during heavy or repetitive movements.

SELECTION® SOFT

SELECTION®Soft is a medium-stable wrist orthosis that has the moulded CS-spoon on the volar side and a softer (1 cm narrow) straight plastic stay on the dorsal side. Both stays are removable. The orthosis follows the hand's natural bend and less fabric around the thumb allows the thenar muscles to work freely. The two-piece closing system makes the orthosis easy to open and close with one hand and allows adjustment of the width to the forearm. Since the lacing comes from the ulnar side, the risk of misalignment of the thumb is reduced. Adjustable thumb grip. Due to the construction of the material it is possible to adjust the shape slightly by trimming with scissors. The length of the orthosis is 18 cm on the volar side.

Intended use

Supports and relieves the wrist in cases such as rheumatic disorders and soft tissue injuries. Inflammation, overload or when degenerative changes are present.

SELECTION® RADIALIS THUMB PART

The SELECTION® range presents two new products, Radialis Finger and Radialis Thumb. These are sold as separate items to make it possible to combine them optimally. They are intended to be used when a Radialis Paresis is present (drop hand caused by damage to the radialis nerve) to assist functional gripping ability whilst the nerve recovers. These are intended to be combined with SELECTION® Wrist orthosis model numbers 35204, 35205 and 35209.

Intended use

Radial nerve palsy.

Item No. Left	Item No. Right	Colour	Size	Length joint centre MCP1 - joint centre IP1

SELECTION® RADIALIS FINGER PART

Radialis Finger Part comprises two sections that makes it easier to put on and adapt to the best fit. The Finger Part is attached to the soft plush material on the dorsal side of the orthosis. Simple to attach and comfortable to use. Can preferably be combined with Radialis Thumb Part.

Intended use

Radial nerve palsy.

SELECTION® MULTIOPEN

SELECTION® Multiopen is a medium-stable wrist orthosis with dual locking function. It can be fully opened and then loosely closed with Velcro and tightened with lacing. The user can choose to open it completely each time the orthosis is donned or doffed, or use only the lacing function. The orthosis follows the hand's natural bend and less fabric around the thumb allows the thenar muscles to work freely. The two-piece drawstring in combination with the Velcro closure allows for the adjustment of the width for a wider forearm. As the lacing is on the ulnar side, the risk of misalignment of the thumb is reduced. There is also an adjustable thumb band on the volar side. Due to the construction of the material it is possible to slightly adjust the shape by trimming with scissors for optimal fit.

Made in the airy and comfortable SELECTION® material with all the functions that this offers. The orthosis is 22 cm long, 4 cm longer than a SELECTION® Soft 35204. It has a removable mouldable aluminium stay on the volar side.

Intended use

Recovery after healed distal radius fracture, rheumatic disorders, soft tissue injuries or repetitive stress injuries. Inflammation, overload or when degenerative changes are present.

SELECTION® RIGID

SELECTION® Rigid is a medium-stable wrist orthosis with a thumb section. The brace has the moulded plastic CS-stay on the volar side and a softer (1 cm narrow) straight plastic stay on the dorsal side. Both stays are removable. The thumb section gives support through its more rigid material. The orthosis follows the hand's natural bend. As the lacing comes from the ulnar side, risk of misalignment of the thumb is reduced. Due to the construction of the material it is possible to adjust the shape slightly by trimming with scissors, for optimal fit. The length of the orthosis is 18 cm on the volar side.

Intended use

Supports and relieves the wrist and CMC-joint in cases such as rheumatic disorders and soft tissue injuries. Inflammation, overload or when degenerative changes are present.

SELECTION® OPEN WRIST

SELECTION® Open Wrist is a fully open model that is simple to don and doff. A small stop prevents the model to open completely. If needed the strap can easily be cut off.

A medium-stable wrist orthosis that has the moulded plastic CS-stay on the volar side and a softer (1 cm narrow) straight plastic stay on the dorsal side. Both stays are removable. The orthosis follows the natural bend of the hand. Less fabric around the thumb allows the thenar muscles to work freely. The orthosis has an integrated wrap around strap and can easily be applied with one hand. The length of the orthosis is 18 cm on the volar side.

Intended use

Supports and relieves the wrist in cases such as rheumatic disorders and soft tissue injuries. Inflammation, overload or when degenerative changes are present.

SELECTION® BROMSA

SELECTION® BROMSA is designed to limit the stress on the tendons by providing a gentle dorsal extension “brake”, to remind and train the user to limit the extension of the wrist. Two stays are included to vary the degree of support. One stay gives mild stop, two stays gives a stronger stop. The SELECTION® lacing system gives a perfect fit and conforms around the wrist. The length of the orthosis is 15 cm on the volar side.

Intended use

The product is intended to restrict movement in the wrist in order to off-load the hand extensors, support the wrist and reduce pain. Lateral Epicondylitis, hypermobility, rheumatic problems, unspecific pain.

Item No. Left	Item No. Right	Colour	Size	Circumference Wrist

SELECTION® OPEN WRIST CHILDREN

A medium-stable wrist orthosis for children, with a removable shaped aluminum stay on the volar side. The unique feature of the orthosis with two thumb straps, one that attaches to the thumb and one that is attached to the back of the hand, gives better control of the abduction and adduction of the thumb.

SELECTION® Open Wrist for Children is intended to immobilize the CMC-joint and wrist to reduce pain, guide the wrist to a neutral position and when needed, support the wrist after trauma/surgery. The length of the orthosis is 16 cm on the volar side.

Intended use

CP, Rheumatoid Arthritis, post trauma.

Item No. Left	Item No. Right	Colour	Size	Circumference Wrist	Palm measurement	Length Volar side

SELECTION® WRIST CHILDREN

Medium stable wrist orthosis, especially developed for children. The orthosis has a removable aluminum stay on the volar side and two closing tabs attached to lacing for a simple one-step locking that also allows the width to be adjusted at wider forearm. Since the lacing comes from the ulnar side, there is reduced risk of thumb being positioned incorrectly. The thumb band is adjustable and the edges are soft. The color details are chosen to appeal to children. The length of the orthosis is 11 - 17.5 cm on the volar side.

Intended use

Neurological disorders where wrist position needs mild correction or support. Inflammatory conditions. Rheumatic conditions.

SELECTION® Thumb Orthosis CHILDREN

Soft and comfortable thumb orthosis designed for children. The orthosis is intended to position the thumb in a functional position to facilitate grip function and support CMC and MCPJ joints. The design encloses the thenar muscle and provides support and improves positioning. The turquoise loop at the end of the wrist strap facilitates the removal of the orthosis with a simple grip. The thumb grip is adjustable and the edges can be trimmed if necessary.

Intended use

Brachial plexus birth palsy (BPBP), spastic hand in CP children, arthrogryposis multiplex congenita children, rheumatic problems.

EXTRA STRAP

To increase the support on the wrist orthoses we offer an extra strap that can be attached to the Velcro strap around the wrist. The strap (46032) is reversible and fits both SELECTION® and VISSION™ products. Can be cut to the desired length without fraying. Tested for long lasting durability. Models 35212 and 35213 fit SELECTION® models.

Vission Thumb Orthosis with Stay

This thumb orthosis has a plastic stay on the radial side to support the thumb and the surrounding structures. Padded material covers the stay to avoid pressure on the joint or muscles. The material is durable and stable, with a comfortable inside. The thumb strap is open for adjustability. The short model is 13 cm long and the longer model is 16 cm on the thumb side.

Intended use

This product is intended to be used for instability in the thumb joints (CMC- or MCP I joints) and to position the thumb in a functional position. Indications such as inflammation, joint stress and for arthritis for the short model, and also Trigger Finger, Morbus De Quervain for the long model.

Vission Wrist Orthosis Short

A slightly shorter wrist orthosis, made of sturdy and durable resilient material with a soft and comfortable inside. The model is completely open and easy to wear. The orthosis has a good anatomical fit inside the hand, over the back of the hand and around the muscles of the thumb. This model is without any volar spoon. It has an open adjustable thumb strap. The model is 13 cm long on the volar side.

Intended use

Supports and relieves the wrist after injury, surgery, arthritis, chronic pain conditions, joint wear or overstrain. Can also be used for prevention in heavy or monotonous work.

Vission Wrist Orthosis

A wrist orthosis in standard model made of sturdy and durable resilient material with a soft and comfortable inside. The model is completely open and easy to wear. The orthosis has a good anatomical fit inside the hand, over the back of the hand and around the muscles of the thumb. It provides a stable support and has a moldable plastic spoon on the volar side. It has an open adjustable thumb strap. The model is 19 cm long on the volar side.

Intended use

Intended for when the wrist needs support and off-loading in cases such as inflammations, work-related overload, and arthritis.

46029 1014	46029 2014	Black	X-Large	19 - 22 cm

Vision Wrist Orthosis with Thumb

This model has the same basic pattern as the standard wrist, with extra support around the thumb. A long stay on the radial side gives a light support. Both the wrist spoon and thumb stay can be removed. It has an open adjustable thumb strap. The model is 19 cm long on the volar side.

Intended use

Intended to restrict movements in CMC and MCP1 joints and to position the thumb in a functional position and to reduce flexion in the wrist. Indications such as Mild to Moderate CMC and MCP1 instability, Ligament Injuries, Tendinitis, Degenerative diseases, Trauma.

Humerux Humerus Orthosis

This humerus orthosis is based on the well-known principles of a "Sarmiento orthosis", an even circular soft tissue compression. The three circular bands are tightened independently of each other. The orthosis' anchorage over the shoulder area means that it fits well in place without slipping down. The strap that goes under the opposite arm has a removable padding for increased comfort. This provides a comfortable orthosis that is easy to apply and easy for the patient to accept. The material of the orthosis allows the skin to breathe and reduces the risk of irritation. The orthosis has two thermoplastic plates that can be adjusted by heating if necessary and the shape can be adjusted with a scissor. This is not necessary in most cases. The orthosis provides free movement of the elbow joint. The orthosis has an inner sleeve to protect the sensitive skin when tightened. The textile materials are tested in accordance with Öko-tex standard 100 and do not contain latex. Available in a regular and long version.

Intended use

Indicated for the treatment of diaphyseal humeral fractures, postoperative treatment of fractures and control of the instability of the fractures focus during the consolidation process.

Elbow brace – Cubital tunnel splint

A universal easy to fit splint that effectively restricts elbow flexion to help reduce the pain associated with Cubital Tunnel Syndrome. A soft padded wrap with an adjustable aluminium stay. The splint is easy to apply, lightweight and breathable.

Intended use: Cubital tunnel syndrome or other situation where restriction/support of elbow is required.

Item No.	Colour	Size	Left/Right
42219 0000	Black	One Size	Bilateral

Sling Strap

The universal, adjustable non-stretch Sling Strap is designed to provide support and immobilisation to the upper limb. It is padded with 5cm wide material that is combined with hook Y-tabs to provide an adjustable and versatile sling system. Sling Strap can be cut to the required length to produce a simple collar and cuff, or similar type of sling. This reduces waste and the adjustability of the material ensures that the sling will fit and can be easily adjusted.

The box comes with 2 rolls of Sling Strap and Y-tabs.

Intended use: It can be used for an array of injuries and conditions where the restriction of shoulder and/or upper arm and/or elbow and/or wrist movement is required such as: dislocation, strains & sprains, pre -and post operatively, rehab stages (post fractures or soft tissue injuries), brachial plexus or peripheral nerve, other injuries

Item No.	Colour	Width	Length	Package
42212 0000	Black	5 cm	2 x 12 m	Roll

Shoulder Immobilizer (lock)

A universal fast-fit low profile shoulder immobiliser. The Shoulder Immobilizer comes complete with a body wrap to which the upper arm wrap is secured to effectively immobilise the shoulder. The wrist wrap fixes to the anterior of the body wrap and this in turn is secured to the shoulder strap using a fast-fit snap buckle. The shoulder strap can be adjusted posteriorly to achieve a comfortable fit for the patient and also to alter the brace to fit left or right. There is a large comfort pad to distribute pressure over the shoulder/clavicle.

This is a shoulder immobiliser that is easy to fit and the modular design greatly improves patient compliance.

Intended use: unloading post-traumatic or post-operative

Item No.	Colour	Size
42213 0000	Black	One Size

Abduction sling, with abduction pad

This is a low cost universal option that utilizes the popular Shoulder Immobiliser. In addition to the comfortable sling with shoulder and body straps this Abduction Sling incorporates a 15 degree abduction pad that is easily secured to the inside of the sling.

Intended use: The Evans Abduction sling is useful in the treatment of various shoulder conditions such as Rotator cuff repairs, Glenohumeral dislocations / subluxation, Posterior/ Anterior capsule repairs or Soft tissue repairs / strains.

Item No.	Colour	Size
42218 0000	Blue	One Size

Jura shoulder immobiliser

The Jura Shoulder Immobiliser can be used as an arm sling or as a shoulder immobiliser and it is designed to be used on both left and right arms. The strong cotton sling with fully adjustable padded shoulder and body straps secures the arm close to the body. Extra padded removable strap around the neck for optimal comfort. The straps are secured through large D-rings which makes it easy to apply the sling with just one arm. Thumb strap for extra support.

Intended use: Can be used for an array of injuries and conditions where the restriction of shoulder and / or elbow movement is required such as:

- Dislocation.
- Strains and sprains.
- Pre and post operatively.
- Rehab stages.
- Other injuries.
- Brachial plexus or peripheral nerve

Contraindicatinos: Do not apply the product in direct contact with broken skin.
